## Research Projects

Evolution strategies for training low precision neural networks 2018  
Polina Kirichenko, Sebastian Stich, Martin Jaggi, Dan Alistarh  
Leveraged lower memory consumption of low-precision networks to increase population sizes in evolution strategies which leads to more efficient gradient-free training.

Bayesian regularization of deep neural networks with weight normalization 2018  
Polina Kirichenko, Alexander Fritsler, Ekaterina Lobacheva, Dmitry Vetrov [\[report\]](#)  
Studied the effect of applying noise to direction and magnitude of weight vectors of neurons in deep networks to achieve regularization and structural sparsity.

Dealing with gradient problems in recurrent neural networks	2017
Polina Kirichenko, Ekaterina Lobacheva, Dmitry Vetrov	<a href="#">[report]</a>
Studied constraints on weight matrices of recurrent layers that improve training stability and alleviate vanishing and exploding gradients in RNNs.	
Large-scale stochastic EM-algorithm	2016
Polina Kirichenko, Dmitry Vetrov	<a href="#">[code]</a> , <a href="#">[report]</a>
Applied stochastic optimization techniques to Expectation-Maximization algorithm to make it converge faster than the full EM on large datasets with a negligible drop in quality.	
Programming in natural languages: E-English	2014
Polina Kirichenko, Yuriy Syrovetskiy (Yandex)	<a href="#">[code]</a>
The 1st award at <a href="#">Yandex Student Conference</a> 2014 (Moscow); presented at the International Student Science Fair 2013 (Camborne, UK). Programming language resembling natural English, designed to simplify learning to code and to make code understandable to non-programmers.
