Research Projects

Evolution strategies for training low precision neural networks

2018

Polina Kirichenko, Sebastian Stich, Martin Jaggi, Dan Alistarh

Leveraged lower memory consumption of low-precision networks to increase population sizes in evolution strategies which leads to more efficient gradient-free training.

Bayesian regularization of deep neural networks with weight normalization

2018

Polina Kirichenko, Alexander Fritsler, Ekaterina Lobacheva, Dmitry Vetrov

[report]

Studied the effect of applying noise to direction and magnitude of weight vectors of neurons in deep networks to achieve regularization and structural sparsity.

Vanishing and exploding gradients in recurrent neural networks

2017

Polina Kirichenko, Ekaterina Lobacheva, Dmitry Vetrov

report

Studied constraints on weight matrices of recurrent layers that improve training stability and alleviate vanishing and exploding gradients in RNNs.
